Summary

Final year B.Tech CSE student passionate about AI, gaming, and human-centered technology. Hands-on experience building emotion-aware systems and gamified solutions, with a growing focus on securing digital assets through cybersecurity and blockchain-based digital forensics. Proficient in HTML, CSS, Python, combined with a practical foundation in vulnerability scanning and network security. Driven by the vision of developing futuristic, secure, and user-centric tech experiences.

Skills

Programming HTML, CSS, JS, C, C++, Java, MySQL, Python

Security OpenVAS, Linux, Networking, Nessus

Tools Git, Microsoft Office Suite, Flutter, Arduino

Domains Cybersecurity, AI/ML, App Dev, Game Testing

Internships & Workshops

Cyber Security Workshop – Offenso Academy

Jul 2025

- Performed automated vulnerability assessments using Nessus and Acunetix in controlled lab environments.
- Analyzed scan results to generate technical reports and recommended remediations for identified security flaws.

AI & ML Internship – Cydez Technologies

Jun 2025

- Implemented machine learning models and explored AI-driven data processing techniques.
- Collaborated on technical solutions using Python for automated pattern recognition.

Cybersecurity Certification – Skill India Digital

Aug 2024

- Studied fundamental principles of ethical hacking and basic network protection strategies.
- Developed a baseline understanding of threat landscapes and security best practices.

Software Testing – Zoople Technologies

Apr 2025

- Designed manual test cases and design protocols to identify functional bugs and system weaknesses.
- Executed systematic bug tracking to ensure software reliability and security integrity.

Education

Bachelor of Technology (BTech) in Computer Science Engineering

APJ Abdul Kalam Technological University (KTU) — Expected Graduation: 2026

Higher Secondary Education (Class 12)

GHSS, Edappally — 9.3 CGPA — 2022

Secondary Education (Class 10)

Guardian Angels' HSS, Manjummel — 10.0 CGPA — 2020

Projects

Secure Evidence Locker – Digital Forensics Platform

Current

- Designing a blockchain-based system using R3 Corda to ensure an immutable chain of custody for forensic evidence.
- Engineering automated Python scripts for SHA-256 hashing and encryption to verify evidence authenticity before ledger anchoring.

MoodMate – Emotion-Aware AI System

May 2025

- Developed a real-time application utilizing face detection for emotion recognition via AI/ML integration.
- Focused on secure data handling for user-centric interaction.

Eco-Challenge – Gamified Sustainability Platform

Jan 2025

- Engineered a mobile solution for carbon footprint calculation and habit-reward systems.
- Built a cross-platform interface ensuring responsive design and user data management.

PillPal – Medicine Reminder App

Mar 2025

- Designed and implemented a reliable mobile application to provide timely medication alerts and support custom scheduling for users.
